

**For Release Time
May 14th, 2019**

Tilden Marcellus LLC

Corporate, Houston Texas

Houston, TX— May 14th, 2019 — Tilden engineers and geologists are presenting an interdisciplinary study titled “Optimizing Perforating Schemes to Achieve Uniform Proppant Distribution” at the annual Unconventional Resources Technology Conference (URTeC) in Denver, CO. The study highlights the team’s work generating a cost-neutral method to improve well stimulation effectiveness.

Positive Well Results

Through the use of limited entry techniques, Tilden’s cutting-edge completion design has been validated with the use of downhole cameras, showing improved diversion across the wellbore. This has resulted in improved production and more effective completions.
